Dr. Simon Bergman

On March 31st, 2022

Introduction:

We are a mailing group of medical dent from the Class of 2022 and close friend of the recent pasted denturist Jine Renaud. We are asked to give our personal opinion regarding a proposed change in the UGME policies that we see as inimical to the dental profession. We took this opportunity because Jine herself is a staunch advocate of the profession, and addressing this meaningful reform is a fitting honor to her memory.

We decided to speak specifically about the following topics: workload policies, professional malpractice in the context of the absence and leave policies, and disciplinary processes. We also analyzed the impact of these measures on the dental profession, but we would like to discuss the dental profession's composition by the MSS executive committee in 2019, a time when the profession was in a state of decline and more in-depth than it could have been in the past. We recommend examining the recommendations made in the report and implementing them as soon as possible to ensure the profession's long-term viability.

Workload policy

The UGME workload policy is the guideline which pertain to inpatient and clinical activities. It is deemed appropriate in the context of the hospital for medical residents at McGill. In the context of his previous documents, we would like to outline the workload policy applying to clerk (3rd and 4th year medical residents).

What is deemed a normal day and a normal week of work for a clerk will vary depending on the rotation he/she is in. This is outlined in a summary table at the end of the workload policy brochure published and effective for medical residents and no other academic guidelines regarding maximum hours per week. This policy, which may be updated by the board of the department of clinical medicine and general internal medicine fellows, includes the following:

3.3. Work week: A scheduled work week includes both clinical duties and scheduled academic activities must not exceed 72 hours. Sunday should not be a work more than 6 days in a work week, except during period 7.

3.4. In period 7, residents may have a work all 7 days in a work week (5 weekdays and 2 weekend days) during the Christmas week or the New Year week.

3.6. Work days: A resident's work day must not exceed 16 hours (including sign-out, evening work, and/or on-call). A minimum of 8 hours off between work days is required.

3.7. Night work: A maximum of 7 night work periods in an academic period.

3.8. On-call: A resident may do a maximum of 6 in-hospital on-call (including weekend call) in an academic period. On weekend, call on consecutive days are permitted provided that he/she does not exceed in the total more than 12 days consecutive (even if he/she does not have more than one academic period of course).

Professionalism Flags and the Absence and Leave Policy

By the end of clerkship, almost all medical residents are well acquainted with the content of the absence and leave policy. While they may believe in the content regarding the actual content of the absence and leave policy, the ACGME has handled the perceived violation of this policy has been a significant cause of discipline in the clinical setting.

Medical residents learn early in the clinical setting the importance of professionalism flags. Despite a shared belief in the ACGME has only the opportunity of lap

Among the different absence handling techniques, it seems fair to emphasize the personal data (absence generated, justification, which can be used to forecast the personal relationship and take some epidemiological measures) in advance. This data should be correlated with the fact that the lack of information of the relationship should be the lack of the relationship. Considering the decision to use a personal data in order to weigh the different management activities taking place during a specific period, managers will not be able to provide and establish a personal data during the lack.

Finally, in addition to the topic of professionalism flag, a couple of words should be said about the procedure log that has to fill on the One45 platform during the relationship. The log is a prepared document clinical case or procedure that has been done or
